Exomalopsis mellipes, Cresson.

San Rafael, State of Vera Cruz, Mexico, at flowers of plant no. 31 (*Cordia* sp., probably *C. ferruginea*), middle of July (*C. H. T. Townsend*).

Epeolus Martini (Ckll.).

Epeolus remigatus, var. *Martini*, Ckll. *Canad. Entom.* xxxii. p. 362 (1900).

In the collection of the Colorado Agricultural Experiment Station are specimens taken in Colorado; and after studying them, I feel satisfied that they represent a valid species.

Xenoglossodes imitatrix, Ckll. & Porter.

Glorieta, New Mexico, Aug. 16, 1903, 1 ♀ (*W. P. Cockerell*).

The specimen has a red stripe on the mandibles.

Diadasia rinconis, Ckll.

Pecos, New Mexico, Aug. 4, 1903, 1 ♀ at flowers of *Opuntia arborescens*.

Lithurgopsis apicalis (Cresson).

Pecos, N. M., Aug. 4, 1903, 1 ♂ at flowers of *Opuntia arborescens*.

The first recurrent nervure enters the second submarginal cell at its extreme basal corner; in some specimens of this species it enters some little distance from the base.

Euglossa cordata (L.), var. *Townsendi*, nov.

Hair of vertex and dorsum of thorax nearly all black; a band of black hairs (conspicuous in lateral view) from eye to eye in front of ocelli; hair of occiput and cheeks white, with a slight yellowish tint; wings strongly dusky. Disk of clypeus in male brilliant purple.

Hab. Vicinity of San Rafael, State of Vera Cruz, Mexico, ♂, March 12, "in nest"; females with the same data (*C. H. T. Townsend*).

Perhaps a distinct species.

Anthophora euops, Ckll.

Prospect Lake, Colorado Springs, Colo., at flowers of *Aragallus Lamberti*, May 22, 1 ♂ (*T. & W. Ckll.*).

In fresh specimens the mesothorax is densely covered with greyish-white hair, strongly mixed with black.
